iOS PandaADSDK

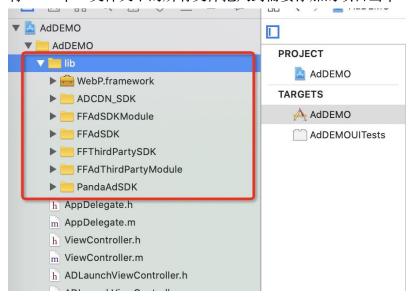

开发者手册

PandaAdSDK支持如下功能:

功能	详情		
开屏广告	开屏广告		
模板信息流广告	模板信息流广告		
激励视频	激励视频		
资讯功能	资讯功能		
营销中心	营销中心		
优惠券商城	优惠券商城		

SDK接入流程

将Demo中lib文件夹下的所有文件拖入到需要添加的项目当中

在项目设置中设置 Other Linker Flags 的值,并添加"-ObjC"标志;

Xcode info.plist 相关配置

ps:需加入定位配置信息,我们会精准定制给推荐更有效的广告 在 info.plist 中添加这两个即可:

Privacy - Location Always and When In Use Usage Description

Privacy - Location When In Use Usage Description

在info.plist中增加权限 NSAppTransportSecurity 如下 权限申请 中的内容

	~	E2717711	1.53
▼ App Transport Security Settings	\$	Dictionary	(1 item)
Allow Arbitrary Loads	\$	Boolean	YES
Privacy - Location Always and Wh	\$	String	需加入定位配置信息,我们会精准定制给推荐更有效的广告
Privacy - Location When In Use Us	\$	String	需加入定位配置信息,我们会精准定制给推荐更有效的广告

在工程中添加 SDK 以及各广告依赖的 framework;

Accelerate.framework

libsqlite3.tbd

libc++.tbd

MobileCoreServices.framework

AVFoundation.framework

AdSupport.framework --- Optional

CoreLocation.framework

CoreMedia.framework

CoreMotion.framework

CoreTelephony.framework

ImageIO.framework

MediaPlayer.framework

QuartzCore.framework

Foundation.framework

Security.framework

StoreKit.framework --- Optional

System Configuration. framework

UIKit.framework

WebKit.framework

libxml2.tbd

libz.tbd

libz.1.2.5.tbd

libbz2.tbd

libresolv.tbd

libiconv.tbd

接入代码

程序启动初始化SDK

SDK初始化配置,在AppDelegate.m中导入SDK的头文件:#import

<PandaAdSDK/PandaConfigManager.h>

,在app程序的启动函数didFinishLaunchingWithOptions中初始化SDK 提示:appId由熊猫提供,通常为项目名小写全拼

```
- (BOOL)application:(UIApplication *)application didFinishLaunchingWithOptions:(NSDictionary *)launchOptions {
    // Override point for customization after application launch.

    self.window = [[UIWindow alloc] initWithFrame:[UIScreen mainScreen].bounds];
    [self.window makeKeyAndVisible];

[PandaConfigManager initSDKWithAppId:@"xiongmaochuxing"];
```

旧版本用户更新请注意(新接入项目可以忽略)

1.先将旧版本SDK全部删除后,再接入新SDK。防止出现引用到旧版本SDK的情况。

2.对于旧版本用到下方代码统计的项目,新版本不再需要调用此方法

```
//统计启动次数
//AppId:项目名称(全拼小写字母)
[PBFFStatisticsManager initWithAppId:@"pandabusTest" type:0 completed:^(B00L success
NSError * _Nullable error) {
}];
```

如果之前传的appId与新分配的appId(应用ID)相同,正常调用PandaConfigManager 的初始化方法即可

```
/**

* 初始化

* 熊猫出行广告初始化

* appId - 应用 ID

*/
+ (void)initSDKWithAppId:(NSString *)appId;
```

如果之前传的appId与新分配的appId(应用ID)不同,需要调用PandaConfigManager

■方法,appId传新分配的id,cityCode传旧的appId

(即旧版本PBFFStatisticsManager统计方法传的appId)

PandaConfigManager中的两个初始化方法二选其一调用即可,不需要都调用。

开屏广告

Appdelegate添加PandaSplashAdManager属性,注意:此属性需要强引用,否则会出现代理无法回调的问题

```
@interface AppDelegate ()<PandaSplashAdManagerDelegate>
@property (nonatomic, strong PandaSplashAdManager * splashManager;
@end
@end
```

初始化并加载开屏广告

```
#pragma mark - 加载开屏广告
-(void)loadSplashAd {
   CGRect frame = [UIScreen mainScreen].bounds;
   // bottomView - [可选], 兜底图, 防止开屏广告材料还没拉取到, 会有白屏展示, 建议: 兜底可以设置为启
   UIView *bottomView = [[UIView alloc] initWithFrame:frame];
   UIImageView * bottomImageView = [[UIImageView alloc]initWithFrame:frame];
   bottomImageView.image = [UIImage imageNamed:@"bottomView_image"];
   [bottomView addSubview:bottomImageView];
   //logoView -广告发起请求并展示在Window中,同时在屏幕底部设置应用自身的Logo页面或是自定义View
   CGFloat height = [UIScreen mainScreen].bounds.size.width/(750.0/200.0);
   UIView *logoView = [[UIView alloc]initWithFrame:CGRectMake(0, [UIScreen
mainScreen].bounds.size.height - height, [UIScreen mainScreen].bounds.size.width,
height)];
   logoView.backgroundColor = [UIColor whiteColor];
   UIImageView *logoImageView = [[UIImageView alloc]initWithImage:[UIImage
imageNamed:@"logo_image"]];
   CGFloat logoImgHeight = logoView.bounds.size.height;
   CGFloat logoImgWidth = logoView.bounds.size.width;
   logoImageView.frame = CGRectMake((logoView.frame.size.width - logoImgWidth)/2.0,
(logoView.frame.size.height - logoImgHeight)/2.0, logoImgWidth, logoImgHeight);
   [logoView addSubview:logoImageView];
   self.splashManager = [PandaSplashAdManager defaultClient];
   [self.splashManager initSplashAdWithPlcId:@"" TotalFetchDelay:5 window:self.window
bottomView:bottomView logoView:logoView delegate:self
rootvc:self.window.rootViewController];
```

实现开屏广告代理方法

```
/**

* 开屏广告成功加载

*/

- (void)PBSplashAdDidLoadData {
```

```
- (void)PBSplashAdFailToLoad:(NSError *)error {
  NSLog(@"PandaAdLOG%s---%@ error:%@",__FUNCTION__,@"开屏广告展示失败",error);
* 开屏广告曝光回调
- (void)PBSplashAdExposured {
- (void)PBSplashAdClicked {
- (void)PBSplashAdClosed {
- (void)PBSplashAdDissmissDetail {
```

模板信息流广告

初始化模板信息流广告

```
self.manager = [[PandaNativeExpressAdManager alloc]init];
```

```
[self.manager initNativeExpressAdWithPlcId:@"" rootvc:self delegate:self
adSize:self.adView.bounds.size];
```

实现模板信息流广告代理方法

在渲染成功的代理中,将回调的view添加到视图上即可

```
- (void)PandaAdNativeExpressAdSuccessToLoad {
  NSLog(@"加载成功");
响变现效果,得不到广告收益。
- (void)PandaAdNativeExpressAdDidFailWithError:(id)error {
  NSLog(@"加载失败");
· (void)PandaAdNativeExpressAdRenderSuccessWithView:(UIView *)view
manager:(PandaNativeExpressAdManager *)manager {
   [self.adView addSubview:view];
 (void)PandaAdNativeExpressAdRenderFailWithError:(id)error {
- (void)PandaAdNativeExpressAdDidClick {
 (void)PandaAdNativeExpressAdDidBecomeVisible {
```

```
NSLog(@"曝光回调");

/**

* 关闭广告回调

*/

- (void)PandaAdNativeExpressAdDidClose {
    NSLog(@"美闭广告回调");
}
```

激励视频广告

初始化激励视频广告

```
self.manager = [[PandaRewardVideoAdManager alloc]init];
[self.manager initRewardVideoAdWithPlcId:@"" delegate:self rootvc:self];
```

实现激励视频广告代理方法

```
**

* 加载成功

*/

- (void)PandaAdRewardVideoAdDidLoad {
    NSLog(e"加载成功");
}

/**

* 加载失敗

*/

- (void)PandaAdRewardVideoAdDidFailWithError:(id)error {
    NSLog(e"加载失败");
}

/**

* 下载成功

*/

- (void)PandaAdRewardVideoAdDidDownLoadVideo {
    NSLog(e"下载成功");
}

/**

* 点击广告

*/

- (void)PandaAdRewardVideoAdDidClick {
    NSLog(e"点击广告");
}

/**

* 感击广告

*/

- (void)PandaAdRewardVideoAdDidClick {
    NSLog(e"点击广告");
}

/**

* 職光回過
```

```
*/
- (void)PandaAdRewardVideoAdDidBecomeVisible {
    NSLog(@"曝光回调");
}

/**

* 视频播放完成

*/
- (void)PandaAdRewardVideoAdDidPlayFinishWithError:(id)error {
    NSLog(@"视频播放完成");
}

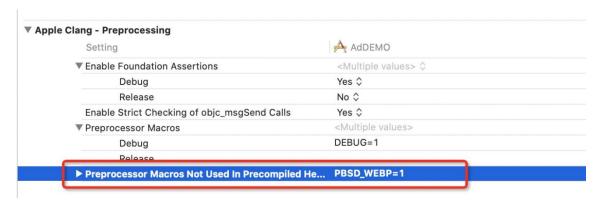

/**

* 播放完成点击关闭

*/
- (void)PandaAdRewardVideoAdDidClose {
    NSLog(@"播放完成点击关闭");
}
```

资讯功能

项目配置 设置Build Settings -- Preprocessing, add "PBSD_WEBP=1"

加载资讯控制器

PBAdInfoMainCtrl为资讯viewController,可根据项目需要,加载此页面 初始化方法:-(instancetype)initWithProid:(NSString*)proid; proid为熊猫提供

ctrl = [[PBAdInfoMainCtrl alloc] initWithProid:@""];

营销中心

1.加载营销中心

在需要加载营销活动的ViewController调用如下方法 参数说明:

```
/**
* 加载营销活动
* AppId - 营销中心appId(注意不是广告appId,字母数字组合,由熊猫提供。)
* splashPlcId - 营销中心开屏广告位id,由熊猫提供
* rewardVideoPlcId - 营销中心激励视频广告位id,由熊猫提供
* userId - app的用户id,用于区分用户的标识
* superController - 加载营销活动的VC
* marketingShowCode - 用于区分显示活动位置的code,不同位置加载传不同的showcode,熊猫提供
* titleColor - 导航栏title以及icon颜色
* backColor - 导航栏背景颜色
*/
```

```
#import <PandaAdSDK/PBADMarketingActivityManager.h>
```

```
[PBADMarketingActivityManager initWithAppId:@"" splashPlcId:@"" rewardVideoPlcId:@""
userId:@"" superController:self marketingShowCode:@"" titleColor:[UIColor whiteColor]
backColor:[UIColor blackColor] complete:^(PBADMarketingActivityModel*_Nonnull dataModel
BOOL success, NSError * _Nonnull error) {
    }];
```

2.加载活动列表页面

跳转至营销中心活动列表

```
PBADAvtivityListViewController *controller = [[PBADAvtivityListViewController alloc]
initWithNibName:@"PBADAvtivityListViewController" bundle:nil];
  controller.appId = @"营销中心Id";
  controller.userId = @"app用户id";
  controller.titleStr = @"优惠活动";
  controller.splashPlcId = @"广告位id";
  controller.backColor = [UIColor whiteColor];
  controller.titleColor = [UIColor blackColor];
  controller.hidesBottomBarWhenPushed = YES;
  [self.navigationController pushViewController:controller animated:YES];
```

优惠券商城

在项目info.plist中LSApplicationQueriesSchemes下添加下面字段

```
<key>LSApplicationQueriesSchemes</key>
<array>
<string>didipasnger</string>
<string>alipayshare</string>
```

```
string>alipay</string>
string>weixin</string>
sstring>wechat</string>
string>weibosdk2.5</string>
string>weibosdk</string>
string>sinaweibohdsso</string>
string>sinaweibosso</string>
string>sinaweibohd</string>
string>sinaweibo</string>
string>openApp.jdMobile </string>
string>taobao</string>
string>pinduoduo</string>
sstring>tbopen</string>
string>tmall</string>
string>eleme</string>
string>vipshop</string>
string>itaobao</string>
string>suning</string>
string>alipayqr</string>
string>jdlogin</string>
string>weixinULAPI</string>
```

加载优惠券商城

```
ctrl = [[PBShopWebViewController alloc] initWithTitle:@"" webViewHeight:[UIScreen
mainScreen].bounds.size.height];
[self.navigationController pushViewController:ctrl animated:YES];
```

PBShopWebViewController 为SDK提供的webView容器,便于开发者集成开发。

开发者也可以自行创建ViewController加载商城url实现自定样式以及业务: url获取方式:

PandaConfigManager中

```
/**

* 获取优惠券商城h5 Url (初始化后调用)

*/

+ (NSString *)getShopUrl;

WKWebView代理方法需实现:
```

```
- (void)webView:(WKWebView *)webView
decidePolicyForNavigationAction:(WKNavigationAction *)navigationAction
decisionHandler:(void (^)(WKNavigationActionPolicy))decisionHandler {
    NSURL *url = navigationAction.request.URL;
```

```
if (navigationAction.targetFrame == nil) {
    [webView loadRequest:navigationAction.request];
}
if ([url.scheme hasPrefix:g"tel"]) {
    if ([[UIApplication sharedApplication] canOpenURL:url]) {
        [[UIApplication sharedApplication] openURL:url];
        decisionHandler(WKNavigationActionPolicyCancel);
        return;
    }
    decisionHandler(WKNavigationActionPolicyAllow);
    return;
}
if (!IsStrEmpty(url.scheme) && ![url.scheme hasPrefix:g"http"] && ![url.scheme hasPrefix:g"about"]) {
        if ([[UIApplication sharedApplication] canOpenURL:url]) {
            if ([[UIApplication sharedApplication] canOpenURL:url]) {
                [[UIApplication sharedApplication] openURL:url];
                decisionHandler(WKNavigationActionPolicyCancel);
                return;
            }
            decisionHandler(WKNavigationActionPolicyAllow);
            return;
}
decisionHandler(WKNavigationActionPolicyAllow);
```

其他

关于提交AppStore 隐私信息,请参照附1文档。 关于App Tracking Transparency 权限,请参照附2文档(可选)。
